5M+ Final users	12M+ Smart Devices	38 Countries
1,4M+ Clients supported through our response center	224 k Hospital beds using Tunstall systems	12 000 B2B clients

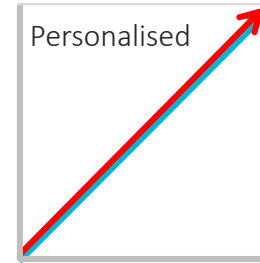

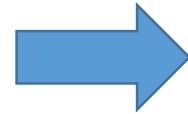

From reactive model to personalised and predictive model

linear model that treats the user population as a homogeneous group receiving the same benefits.

overprotection
Unmet need

Demand from the wearer
Telecare service

Treats the user population as a diverse group:
- intensifying care for people with a special risk or vulnerability and
- avoiding excessive protection (that can create dependency) from those with less intensive needs.

Combination of
- Making the home secure
- Making the person secure
- Psychologists' support
- Health monitoring

Fight against loneliness (call/ visit)

Additional technology To prevent failure

Proactive Campaign on Aging

Social local program
